

R&S®HM020E Triple-Loop Antenna

9 kHz to 30 MHz

Fully automatic measurement of magnetic field strength

New

The R&S®HM020E triple-loop antenna allows fully automatic measurement of the magnetic field strength in the X, Y and Z plane as prescribed in CISPR 15 and CISPR 16-1-4.

The DUT is placed on a wooden pedestal in the centre of the loops.

The loop construction using a cut coaxial line provides excellent screening against the electric components of the interfering signals so that unambiguous test results are obtained.

Key facts

- Fully automatic measurements of the magnetic field strength in the X, Y and Z planes of a DUT placed at the antenna center
- Remote control via a Rohde&Schwarz EMI receiver
- Loop system suitable for mobile use and foldable into one plane
- Wooden pedestal for 100 kg load available permitting the loops to be moved freely
- Measuring method in line with CISPR 15 (refers to CISPR 16-1-4)
