Definitions

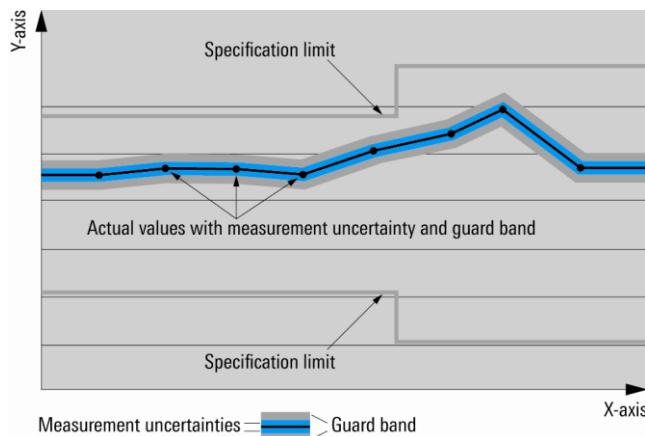

General

Product data applies under the following conditions:

- Three hours storage at ambient temperature followed by 30 minutes warm-up operation
- Specified environmental conditions met
- Recommended calibration interval adhered to
- All internal automatic adjustments performed, if applicable

Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as $<$, \leq , $>$, \geq , \pm , or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with $<$, $>$ or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are designated with the format "parameter: value".

Typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

Specifications

The specifications of the R&S®VSE are based on the data sheet specifications of the R&S®FSW, R&S®FSWP, R&S®FSVA3000, R&S®FSV3000, R&S®FSVA, R&S®FSV, R&S®FPS, R&S®FPL1000 and R&S®FSL analyzers as well as the R&S®RTP, R&S®RTO2000 and R&S®RTO1000 oscilloscopes in the default operating mode. They have not been checked separately and are not verified during instrument calibration. Measurement uncertainties are given as 95 % confidence intervals. The specified level measurement errors do not take into account systematic errors due to reduced signal-to-noise ratio (SNR).

Minimum system requirements for the R&S®VSE

Running on a PC

Operating system	Windows 7, 64 bit/Windows 10, 64 bit
Hard disk space	5 Gbyte
RAM	≥ 4 Gbyte
CPU	min. 1.5 GHz (> 2.5 GHz recommended)
Graphics resolution	≥ 1280 × 1024 pixel
USB	1 free USB port for connecting the R&S®FSPC smart card reader (if no floating server or PC built-in smart card reader is used)
Measuring instrument connection	LAN connection (VXI-11, Hi-Slip), VISA driver ¹

Running on an instrument

Using a keyboard and mouse with the instrument is suggested for optimum operation. Front panel keys of the instrument are only for operating the firmware and not the R&S®VSE.

R&S®FSW	R&S®FSW firmware version 2.40 or newer
R&S®FSVA3000, R&S®FSV3000	R&S®FSVA3000/R&S®FSV3000 firmware version 1.10 or newer
R&S®RTP	Windows 10, 64 bit operating system
R&S®RTO	Windows 7, 64 bit/Windows 10, 64 bit operating system

R&S®VSE

Frequency

Frequency range	RF input	same as supported instrument

²⁸ R&S®RTO-K11 I/Q software interface required.²⁹ R&S®RTP-K11 I/Q software interface required. Firmware version 4.60 required.³⁰ For R&S®RTO1000 firmware version 3.0.1.1 or higher required, for R&S®RTO2000 firmware version 3.50.3.1 or higher required.³¹ R&S®RTP-B110 required.³² R&S®RTO-B110 required.³³ R&S®RTO-B104 required.³⁴ R&S®RTO with four inputs required. R&S®RTO with two inputs is limited to half the record length when using two channels, R&S®RTO with four channels is limited as well when using CH1 and CH2 or CH3 and CH4 at the same time.³⁵ R&S®RTO with 1 GHz bandwidth required.³⁶ R&S®RTO with 2 GHz bandwidth required.³⁷ R&S®RTO with 3 GHz bandwidth required.³⁸ R&S®RTO with 4 GHz bandwidth required.³⁹ R&S®RTO with 6 GHz bandwidth required.⁴⁰ R&S®RTP with 6 GHz bandwidth required.⁴¹ Always using 20 GHz sample rate and therefore limited to a half of the record length.⁴² R&S®RTP with 8 GHz bandwidth required.⁴³ R&S®RTP with 13 GHz bandwidth required.⁴⁴ Always using 40 GHz sample rate and therefore limited to a fourth of the record length.⁴⁵ R&S®RTP with 16 GHz bandwidth required.

Triggering

R&S®	FSW	FSWP	FSVA3000, FSV3000	FSVA, FSV	FPS	FPL1000, ZNL	FSL	RTP, RTO
RF input ⁴⁶	same as supported instrument							only external trigger
I/Q file	magnitude, time							

Measurement parameters

Input		RF
Swap I/Q		on/off
FFT parameter	algorithm	single, average
	FFT length	3 to 524288
	window function	flattop, Gaussian, rectangle, 5-term, Blackman-Harris
	window length	3 to current record length
	window overlap	0 to 0.95
Spectrum display	frequency points	51 to 524288
Statistic display	histogram bins	up to 1024
Overlap processing		0 % to 99.9 %
I/Q file recording	record length	same as supported instrument ⁴⁷

Software features

I/Q file handling	recording playback
Hardware support	up to 20 instruments in parallel when using R&S®VSE enterprise edition
Sequencer	parallel measurement execution on different instruments when using R&S®VSE enterprise edition
Multi-measurement	sequential measurement execution on the same instrument

Supported measurement modes

Adjacent channel leakage ratio (ACLR)	measures the active channel or adjacent channel power for one or more carrier signals, depending on the current measurement configuration
Occupied bandwidth (OBW)	measures the occupied bandwidth, i.e. the bandwidth which must contain a defined percentage of the power
Spectrum emission mask (SEM)	defines a measurement that monitors compliance with a spectral mask; the mask is defined with reference to the input signal power
I/Q analyzer	general I/Q data analysis

⁴⁶ Trigger availability depends on the instrument used.

⁴⁷ The maximum record length can be restricted in case the R&S®VSE needs to use a resampler.

Result displays in I/Q analyzer

Magnitude	traces	up to 6
	markers	up to 17
	scaling	lin/log/lin with unit

	markers	up to 17
Real/image (I/Q)	traces	up to 6
	markers	up to 17
Marker table	for each marker	X value Y value band power value reference marker trace
Statistics APD	traces	2
	markers	up to 17
Statistics CCDF	traces	1
	markers	up to 17
Phase versus time	traces	up to 6
	markers	up to 17

Remote programming

SCPI	The SCPI remote interface allows full access to the R&S®VSE features.
Remote display	To operate the R&S®VSE software or view its display from a remote PC, the use of Windows remote desktop or VNC is recommended.

File formats

MATLAB®	.mat(v4)	native support, maximum file size is 2 Gbyte or 500000 complex samples, please refer to the MathWorks® documentation for details
	.mat(v7.3)	native support; maximum size of the MAT-file is imposed only by your native file system, please refer to the MathWorks® documentation for details
ASCII	.csv	
Rohde & Schwarz formats	.iq.tar	I/Q data is always formatted as complex and float32. For details, see www.rohde-schwarz.com .
	.iqw	float32 is always exported as (II..., QQ...)
	.wv	see R&S®WinIQSIM2™ or R&S®SMW user manual for details
	.iqx	see R&S®IQW user manual for details

Connectivity

	R&S®VSE basic edition	R&S®VSE enterprise edition
Max. number of channels	3	30
Max. number of groups	1	30
Max. number of connected instruments	1	128

Supported instruments

For details, see the corresponding data sheets.

⁵⁶ R&S®RTO2000 firmware version 3.50.3.1 or higher required.

⁵⁷ R&S®RTO1000 firmware version 2.51.1.0 or higher required.

⁵⁸ R&S®ZNL3-B1 required.

⁵⁹ R&S®NRQ6-K1 required.

Ordering information

Designation	Type	Order No. ⁶⁰
Vector signal explorer		
R&S®VSE basic edition ^{61, 62}	R&S®VSE	1345.1011.06
R&S®VSE enterprise edition ⁶³	R&S®VSE	1345.1105.06
R&S®VSE software maintenance	R&S®VSE-SWM	1320.7622.81
Measurement applications		
Pulse measurement application ^{64, 65}	R&S®VSE-K6	1320.7516.06
Analog modulation analysis (AM/FM/φM) ^{63, 64}	R&S®VSE-K7	1320.7539.06
GSM measurements ^{63, 64}	R&S®VSE-K10	1313.1368.06
Transient measurements ^{63, 64}	R&S®VSE-K60	1320.7868.06
Transient chirp measurements ^{63, 64}	R&S®VSE-K60C	1320.7874.06
Transient hop measurements ^{63, 64}	R&S®VSE-K60H	1320.7880.06
Vector signal analysis ^{63, 64}	R&S®VSE-K70	1320.7522.06
Multi-modulation vector signal analysis ^{63, 64, 65}	R&S®VSE-K70M	1345.1211.06
BER measurements with PRBS data ^{63, 64, 65}	R&S®VSE-K70P	1345.1228.06
3GPP FDD measurements ^{63, 64}	R&S®VSE-K72	1320.7580.06
IEEE 802.11a/b/g measurements ^{63, 64}	R&S®VSE-K91	1320.7597.06
IEEE 802.11p measurements ^{63, 64}	R&S®VSE-K91p	1320.7680.06
IEEE 802.11n measurements ^{63, 64}	R&S®VSE-K91n	1320.7600.06
IEEE 802.11ac measurements ^{63, 64}	R&S®VSE-K91ac	1320.7616.06
OFDM signal analysis ^{63, 64}	R&S®VSE-K96	1320.7922.06
EUTRA/LTE FDD uplink and downlink measurement application ^{63, 64}	R&S®VSE-K100	1320.7545.06
EUTRA/LTE Advanced and MIMO (downlink) ^{63, 64, 66}	R&S®VSE-K102	1320.7551.06
EUTRA/LTE TDD uplink and downlink measurement application ^{63, 64}	R&S®VSE-K104	1320.7568.06
EUTRA/LTE narrowband IoT analysis ^{63, 64}	R&S®VSE-K106	1320.7900.06
3GPP 5G NR downlink and uplink measurement application ^{63, 64}	R&S®VSE-K144	1309.9574.06
3GPP 5G NR downlink MIMO measurements ^{63, 64}	R&S®VSE-K146	1345.1305.06
User defined frequency correction by SnP file ^{63, 64, 67}	R&S®VSE-K544	1309.9580.06
License dongles		
License dongle	R&S®FSPC	1310.0002.03
Floating license dongle	R&S®FSPC-FL	1310.0002.04
Supported instruments		
For details, see table of supported instruments on page 9		

⁶⁰ Floating variant is xxxx.xxxx.51 and requires R&S®FSPC-FL.

⁶¹ R&S®FSPC required.

⁶² Not available for R&S®FSPC-FL.

⁶³ R&S®FSPC or R&S®FSPC-FL required.

⁶⁴ R&S®VSE basic edition or R&S®VSE enterprise edition required.

⁶⁵ R&S®VSE-K70 required.

⁶⁶ R&S®VSE-K100 or R&S®VSE-K104 required.

⁶⁷ R&S®VSE-K144 required.
